

Inventory Tools

Inventory Tools is an add-on to Clover Inventory. The app keeps no catalogue of its own: it works on the items and categories already in your Clover Inventory, and every item you create, edit, delete or reprice is written to the Clover catalogue and shows up on your Clover devices.

\$1.99 / month

Free trial: 30 days

Clover POS (United States and Canada)

OVERVIEW

How it works

1 An add-on to Clover Inventory

The app has no catalogue of its own. **Items** and **Categories** show what is in your Clover Inventory, and every change here is written back to it and syncs to your Clover devices.

2 Bulk work starts with categories

A price change asks which Clover categories to touch, then the server applies the percentage or the amount to the items in them. The app confirms that the request was submitted; the job itself takes up to about a minute.

3 Search is the fast path

Items are found by name, code, SKU or stock quantity, with more-than, less-than and equal filters.

4 Every change is written down

Logs keeps the change history for a date range, with the item name, the old value and the new value, and mails the list to an address you type.

5 Two rules run on the Clover device

The stock check and the age check are set up here and act when an item is added to an order in the Register. Both are held on the device you set them up on, so open the setup on every Clover station.

6 The same screens in a browser

inventory.payplaxe.com (<https://inventory.payplaxe.com>) opens Items, Categories, Logs, Tools and Settings with your Clover account. It is not a separate product: this is the setup side of the app you already have, with nothing extra to buy. The two register-time rules are the exception: they are set up on the Clover POS.

7 Changes are hard to undo

A bulk price change cannot be rolled back from the app, and **Delete all items and categories** empties your Clover Inventory, not a copy of it. Export your items from the Clover dashboard first if you are unsure.

The app never replaces the Clover Register — it adds to it. Payments, taxes and reporting stay in Clover.

FEATURES

What it does

01

Bulk price changes

Increase or decrease prices by **percent** or **amount** for the Clover categories you select. The change runs as a job on the server: the app confirms the request, and the new prices follow within about a minute.

02

Item editing

Create, edit and delete items in the Clover catalogue: name, stock count, code, price, price type (**Fixed**, **Variable**, **Per unit**), SKU, show-in-register and non-revenue flags.

03

Categories

Categories creates a category, renames it, deletes it and assigns items to it. They are the Clover categories, the same ones the Register and Clover Inventory use.

04

Search

Find items by name, item code, SKU or stock quantity, with **more than**, **less than** and **equal** filters.

05

Change logs

Logs lists what changed between two dates: the item name, **Old value:** and **New value:**. The share button mails the same list to an address you type.

06

Check stock count on Clover POS

When the stock count of an item is lower than the quantity on the open order, the app removes the extra lines from that order in the Register. It needs stock tracking in Clover and the switch turned on for that device, and it skips the items on the exceptions list.

07

Age verification setup

Groups of age-restricted Clover items are set up here: a name, **Age Required** and the items the group covers. The Settings row is called **Age Verification on Clover POS**, and the check runs on the Clover device when the item is added to an order.

08

Merchant ID at hand

The Settings screen shows the account name and the Merchant ID that support asks for.

09

Wipe the Clover catalogue

Delete all items and categories deletes them from your Clover Inventory, not only from this app. You have to type **confirm delete** to run it, and there is no undo.

INSTALL

Price & installation

\$1.99 / month

↓ **Install on Clover App Market** (<https://www.clover.com/appmarket/apps/ENQCYFCQWA5TY>)

Every app has a 30-day free trial. Clover bills the subscription with your monthly Clover invoice.

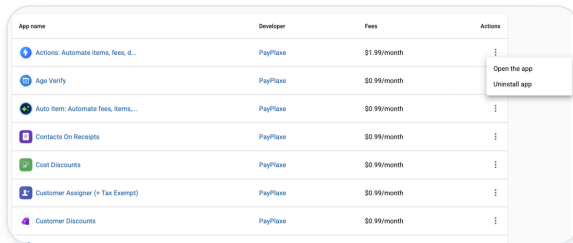

How to install

1. Open the **Clover App Market** — on the device, or at `clover.com/appmarket` in your web dashboard.
2. Find the app by name, or open its direct link from the button above.
3. Tap `Connect` / `Install` and accept the permissions the app requests.
4. The 30-day free trial starts automatically. The subscription then appears on your monthly Clover invoice.
5. Open the app on the Clover device and sign in with a **Manager** or **Admin** employee account to configure it.
6. To cancel later, uninstall the app from the App Market — the steps are right below.

How to cancel the subscription

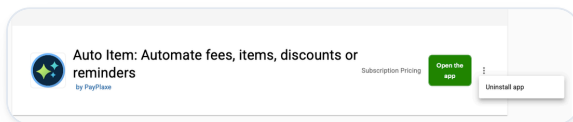

Cancelling means uninstalling the app — there is no separate billing screen.

1. Open the **App Market** — on the Clover device, or in the web dashboard.
2. Open **My Apps**. Every app you pay for is listed there with its monthly fee.

App name	Developer	Fee	Actions
Actions: Automate items, fees, d...	PayPlace	\$1.99/month	⋮
Age Verify	PayPlace	\$0.99/month	⋮
Auto Item: Automate fees, items, ...	PayPlace	\$0.99/month	⋮
Contacts On Receipts	PayPlace	\$0.99/month	⋮
Cost Discounts	PayPlace	\$0.99/month	⋮
Customer Assigner (+ Tax Exempt)	PayPlace	\$0.99/month	⋮
Customer Discounts	PayPlace	\$0.99/month	⋮

3. Tap the ⋮ button on the app's row and choose **Uninstall app**.
4. The app's own page works too: ⋮ next to the green **Open the app** button → **Uninstall app**.

5. Confirm. The subscription stops there and then — the app is off your next Clover invoice.

Install and cancel any time from the Clover App Market.

START HERE

First setup

Do this once, in this order. It takes a few minutes and the app is then ready for the shift.

1. Open the app.

On the Clover home screen the icon is labelled **Inventory**; the screen inside says **Inventory Manager**. **Items** lists your Clover catalogue with stock counts.

2. Use the search field and the **NAME** selector to switch between name, code, SKU and stock searches.

3. Tap **+** to create an item. Tapping a row opens the quick dialog for the stock count; the pencil icon there opens the full editor.

4. Open **Categories** to create a category, rename it or assign items to it.

5. For bulk price work open **Tools** → **Increase/Decrease prices** and select the categories.

6. Choose increase or decrease, percent or amount, enter the value and submit. The percent field fills from the right — it must read **5.00** to mean 5%.

7. Open Clover Inventory afterwards so it syncs, then spot-check a few items.

Bulk changes cannot be undone from the app — check the selection before you

submit.

CONFIGURATION

Setup scenarios

Each scenario is a complete configuration — follow the steps in order.

Most configuration screens require the Clover employee role of Manager or Admin.

1 Raise prices for a category by 5%

Supplier costs went up for one group of goods only.

1. Open the app → **Tools** → **Increase/Decrease prices**.
2. Select the Clover categories the change applies to and confirm.
3. Choose **increase** and the type **percent**, then key digits until the field reads **5.00** — the field fills from the right, so a bare 5 means 0.05%. The row underneath must read **Which is 5.0%** before you submit.
4. Submit the price modify request. The app answers that the request was submitted; the server needs up to about a minute.
5. Open Clover Inventory and sync, then spot-check a few items.

Check whether a cash discount program is running first — raising prices twice compounds them.

2 Stop cashiers ringing up more than you have

Cashiers keep selling goods that are not on the shelf.

1. Turn stock tracking on for those products in Clover Inventory. Without it the app checks nothing.
2. Open **Settings** → **Check stock count on Clover POS** and switch **Enable/disable the feature** on.
3. Open **Exclude items from tracking stock** and select the items that must stay sellable at any stock count (services, deposits, custom items).
4. Repeat both steps on every Clover station. The switch and the exceptions list are stored on the device you set them up on.
5. Test in the Register: with 2 in stock, add the item three times. The third line is removed from the order and a message names the item.

The rule is not only about zero stock. Whenever the stock count is lower than the quantity already on the order, the extra lines are removed.

3 Find and fix problem items quickly

Missing SKUs, wrong price types or negative stock hide in a large catalogue.

1. Open the **Items** tab and switch the search type to **Item Stock**.
2. Filter with **Less than** and a value of 1 to list everything at or below zero.
3. Tap an item to fix the stock count on the spot; tap the pencil icon in that dialog to open the full editor for price, price type, code and SKU.
4. Switch the search to **SKU** or **Code** and look a known identifier up — if the item does not come back, it has no SKU or code yet. The app has no filter that lists blank identifiers.

4 See what changed, and mail the list

Several people edit the catalogue and a price is suddenly wrong.

1. Open **Logs**.
2. Tap the two date buttons at the top and set the start and the end of the range.
3. Read the rows: each one names what was changed, the item, **Old value:** and **New value:**.
4. Tap the share button, type an email address and press **Send**. The same list is mailed there.
5. Fix the item in **Items** if the old value was the right one.

The screen loads the last 1000 records for the range and says so when it hits that limit. Narrow the dates if you see the message.

Grinder Sandwiches	6	☐
Salads 123		

Category row

Name and how many items it contains.

Checkbox

Includes the category in the operation.

CLEAR ALL

Unticks everything.

CONFIRM

Applies the selection to the pending operation.

AT THE REGISTER

Everyday use

What the cashier does after the app is configured.

1. Use the search to find and fix an item in seconds instead of scrolling Clover Inventory.
2. Run bulk price changes outside opening hours; they take time and need a sync afterwards.
3. Keep **Check stock count on Clover POS** on so a cashier cannot ring up more than the stock count.
4. Open **Logs** after a busy day to see which prices and stock counts changed, and by how much.

IF SOMETHING IS WRONG

Troubleshooting

Symptom on the left, what to do on the right.

Prices did not change on the Register.

The price change is a job on the server: it takes up to about a minute. Then open Clover Inventory so it syncs with the cloud, and wait 1–2 minutes.

Items are still sellable when the stock is short.

Three things have to be true: stock tracking is on in Clover, **Enable/disable the feature** is on for that station, and the item is not in **Exclude items from tracking stock**. The switch is stored per device, so check the station you are testing on.

A line vanished from an order.

That is the stock check. It removes the lines that go past the stock count of the item, and a message names the item. Correct the stock count in **Items**, or add the item to **Exclude items from tracking stock**.

An item cannot be found.

Switch the search type — an item without a SKU will not appear in a SKU search.

You deleted everything by accident.

Delete all items and categories cannot be undone, and the items are gone from Clover Inventory as well. Restore from a Clover export.

The app's dialog never appears on the payment screen; Clover shows "Customer is choosing payment method".

Open the Clover **Setup** app → **Payments** and uncheck **Automatically take payment on Connected Device**, so payment is taken on the primary device.

Settings cannot be opened or changed.

Sign in with an employee whose Clover role is **Manager** or **Admin**. Some apps also have their own **Restrict access** switch that locks the configuration.

The app works erratically, or stops reacting after the device has been idle.

Turn off Battery Saver in the device's Android settings and keep the device online.

A change made on one device is not visible on another.

Settings sync through the cloud; give it a minute and make sure both devices have a network connection.

QUESTIONS

FAQ

Does the app keep its own copy of my items?

No. The lists you see are your Clover Inventory. There is nothing to import and nothing to push back: a change made here is a change to the Clover catalogue.

Does a bulk price change affect modifiers?

The bulk tool works on items in the categories you select. For modifier pricing tied to a cash discount program, use [Order Discounts](#), which raises items and modifiers together.

What do the price types mean?

Fixed is a normal price, **Variable** asks the cashier for the amount, **Per unit** multiplies by weight or quantity.

Is 'delete all items and categories' reversible?

No. It deletes the items and categories from your Clover Inventory, and the deletion syncs to your Clover devices. The app makes you type **confirm delete** first. Export a backup from the Clover dashboard before you run it.

Can I work from a computer?

Yes. inventory.payplaxe.com (<https://inventory.payplaxe.com>) opens the same app in a browser, titled **Inventory Manager**. Sign in with **Login via Clover**. It carries Items, Categories, Logs, Tools and Settings, so a little less than the Clover device: the stock check and the age check are set up on the Clover POS.

How much does it cost?

\$1.99 per month, with a 30-day free trial.
